AIA CNY Architectural Explorer Post:

Our goal is to introduce high school students who are considering Architecture as a future career to workshops and discussions that explain various responsibilities an architect performs.

A quick overview of workshops planned include:

- Identifying what architects do.
- Previewing architectural studios at Syracuse University.
- Visit to a construction site.
- Coordinating engineering disciplines.
- A mock charrette.
- An overview of how drawings are made into a built structure.

The program is open to students who are at least high school freshmen at the time of enrollment. The program will be scheduled in October, November, and December for approximately 8 workshops. The fee is a one time cost of \$35 to enroll. An informational Open House is scheduled for the 15th of October, 6:00 pm, held at the Henninger High School cafeteria located at 600 Robinson Street, Syracuse.
